

Airline Reservation System - Manual QA Test Summary Report

System Under Test: PHPTRAVELS flight booking demo

Execution cycle: September 2026

Environment: Web UI, Admin portal, Stripe Sandbox, supplier integrations including Sabre

Executive Summary

The final test plan contains **39 test cases** across Flight Search, Fare, Passenger, Payment, Booking/PNR, Cancellation, Refund, and End-to-End coverage.

Metric	Result
Total test cases	39
Passed	29
Failed	4
Blocked	4
Not Executed	2
Definitive Pass/Fail results	33
Executed-case pass rate	87.9%
Definitive execution completion	84.6%

Module Execution Summary

Module	Total	Passed	Failed	Blocked	Not Executed
Flight Search	8	7	1	0	0
Fare	5	5	0	0	0
Passenger	5	3	2	0	0
Payment	7	5	0	1	1
Booking / PNR	6	5	0	0	1
Cancellation	3	1	1	1	0
Refund	2	1	0	1	0
End-to-End	3	2	0	1	0

Failed Tests

Test Case	Defect	Module	Result
TC_FS_002	DEF-FS-001	Flight Search	Same origin and destination were accepted instead of being blocked.
TC_PAX_003	DEF-PAX-001	Passenger	Excessively long passenger name was accepted and later silently truncated on the invoice.
TC_PAX_005	DEF-PAX-002	Passenger	Valid Child/Infant combinations returned zero flights while adult-only searches returned inventory.
TC_CAN_001	DEF-CAN-001	Cancellation	Cancellation could not complete because Sabre returned an invalid JSON response; PNR was not issued and booking remained Confirmed/Paid.

Blocked / Not Executed

Blocked

- **TC_PAY_005:** Payment timeout could not be safely and deterministically reproduced in the demo / Stripe Sandbox environment.
- **TC_CAN_002:** Post-cancellation status validation was blocked because TC_CAN_001 did not complete successfully.
- **TC_REF_001:** Required Cancelled + Paid refund-eligible test data was unavailable to observe refund initiation.
- **TC_E2E_002:** Retry-after-timeout behavior could not be validated because a deterministic timeout could not be reproduced.

Not Executed / Design-Level

- **TC_PAY_007:** Controlled payment-success + downstream booking/PNR-failure scenario was retained as a design-level integration case.
- **TC_PNR_002:** Dedicated supplier-issued PNR generation was not conclusively validated; booking references existed but PNR issuance was not consistently demonstrated.

Defect Summary

The finalized artifacts reference **5 unique defect IDs**. Four are tied to currently failed tests; **DEF-PAY-001** remains an investigation item after a successful Stripe Sandbox retest.

Defect	Area	Note
DEF-FS-001	Flight Search	Linked to failed test TC_FS_002
DEF-PAX-001	Passenger	Linked to failed test TC_PAX_003
DEF-PAX-002	Passenger	Linked to failed test TC_PAX_005
DEF-PAY-001	Payment	Earlier gateway-limit error; successful Stripe Sandbox retest completed, retained for investigation
DEF-CAN-001	Cancellation / Supplier Integration	Linked to failed test TC_CAN_001

Key Findings

- Core valid search, fare, sandbox payment, booking persistence/retrieval, and the primary end-to-end flow passed.
- Same-origin/destination validation failed.
- Excessive passenger-name input was silently truncated after being accepted.
- Child/Infant passenger combinations returned zero inventory in controlled comparisons where adult-only inventory existed.
- Supplier-issued PNR generation was not conclusively validated as a dedicated test.
- Cancellation processing was blocked by a Sabre invalid-JSON / PNR-not-issued condition.
- Refund-initiation testing was limited by unavailable prerequisite test data; refund amount validation passed.

QA Recommendation

Conditional / not production-ready without follow-up. The demo shows a largely functional core booking path, but the unresolved validation and supplier-integration issues should be fixed and regression-tested before a production-readiness decision.

For portfolio closure, the cycle is complete provided blocked/not-executed limitations remain documented and evidence is sanitized before public publication.

Publication Note

Before publishing evidence, redact personal emails, phone numbers, payment/test-card details, transaction identifiers where inappropriate, and credentials.
